EDUCATION

San Diego State University

Bachelor of Science: *Computer Science*

Graduation: May 2027

GPA: 3.00

Relevant Coursework: Object-Oriented Programming, Data Structures, Software Systems, Computer Architecture

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript

Deployment & Hosting: Netlify, Render, Vercel, Github Pages

Web Dev: HTML, CSS, TypeScript, Tailwind CSS, React.js, Next.js, Express.js, Node.js

Version Control & Management: Github, Taiga

Databases & Backend: MongoDB, PostgreSQL, Google Firebase, Microsoft Azure SQL, ChromaDB

UI/UX & CMS: Plasmic, Figma

AI & Large Language Models: OpenAI API (GPT-4o-mini, Embeddings), LangChain, Retrieval-Augmented Generation (RAG)

PROFESSIONAL EXPERIENCE & LEADERSHIP

Calexico Neighborhood House | [Mission Thrift Store](#) | [Happy Kids Preschool](#) – Calexico, CA (In-Person)

SEO & Digital Marketing Specialist | E-Commerce & Web Optimization

Mar. - June 2025

- Built an inventory management system in Google Sheets using SKU codes to streamline in-person and online tracking of thrift store items, integrating workflows for listings on eBay, OfferUp, and Shopify.
- Partnered with senior leadership and a remote SEO/e-commerce specialist to optimize digital marketing, launching the store's first steady online revenue stream with 30+ sales and ~\$600 profit while maintaining 75% enrollment during seasonal declines.

[Sports Excitement LLC](#) – New York, NY (Remote)

Front-End Developer Intern

Dec. 2024 - Mar. 2025

- Developed responsive UI components with React.js and Tailwind CSS, translating Figma prototypes into pixel-perfect, production-ready code—including the login page—that contributed to the launch of the company's site with seamless cross-device performance.
- Worked in a cross-functional Agile team of ~12+ (front-end, back-end, UX, project manager, scrum master), using Taiga for sprint planning, daily stand-ups, and task tracking to ensure on-time feature delivery.
- Collaborated with front-end and back-end engineers through GitHub for version control and code reviews, ensuring smooth integration and maintaining high-quality standards across the development lifecycle.

[Ectron Corporation](#) – San Diego, CA (Hybrid)

Software Engineer Intern (Asset Tracker)

May - Aug. 2024

- Developed the front-end of "Asset Tracker" with React.js, Next.js, and Plasmic CMS, integrating Azure Maps and CSS animations to display real-time asset locations and improve user experience.
- Led a team of three intern engineers as the only full-stack developer, mentoring peers in HTML, CSS, JavaScript, Express.js, and Node.js while guiding backend implementation for seamless integration.
- Collaborated with backend engineers to connect Azure IoT sensor data with an Azure SQL database, enabling managers to monitor assets across buildings and streamline employee item retrieval.

PROJECTS

LLM-Powered Bible Tutor - (Personal AI/LLM Project, In-Progress)

Sept. 2025

- Developed a retrieval-augmented generation (RAG) system using GPT-4o-mini, LangChain, ChromaDB, and OpenAI embeddings to semantically index and query 35,800+ verses from the Douay-Rheims Catholic Bible, ensuring grounded, citation-based responses.
- Engineered a vector search pipeline (avg. 200ms retrieval, 128k token context support) and custom prompts to minimize hallucinations, improving factual accuracy by >90% compared to baseline GPT responses, enabling users to receive reliable study assistance.

What's Poppin?: A social-media (Reddit) clone - [Live App](#) | [Github Repo](#) - (Personal Full-stack Project)

Feb. - April 2023

- Designed and built a full-stack social media platform (personal project) with React.js and Firebase, implementing secure email authentication, scalable Firestore data models, and full CRUD operations for accounts, posts, and comments.
- Developed core social features—including posts, voting, comments, and threaded replies—supported by a recursive React.js comment system and 20+ modular components, ensuring scalability, maintainability, and engaging user interaction.
- Deployed the platform via GitHub Pages for public access and managed version control with GitHub, simulating professional workflows through documented commits and structured feature updates.

Blog API - [Live App](#) | [Github Repo](#) - (Personal Full-stack Project)

Nov. - Jan. 2023

- Built a full-stack blog application consisting of a React.js frontend and a RESTful backend (Node.js, Express, MongoDB), implementing 10+ endpoints for authentication and full CRUD on posts and comments, tested with 15+ sample accounts to ensure security and reliability.
- Deployed the backend to Render and the frontend via Netlify, maintaining 40+ GitHub commits with structured routes/controllers, enabling scalable integration and simulating professional development workflows.
